

The Most Reliable Portable Printers[®]

A DOVER COMPANY

MicroFlash 4t/4t^e Frequently Asked Questions

What is the difference between the 4t and 4t^e?

4t - The flagship of the O'Neil line of portable printing solutions is the 4t direct thermal portable printer. This workhorse offers the most reliable performance available, printing outstanding quality 4" receipts, proofs of delivery, labels, invoices, and barcodes.

4t^e - The 4t^e is an *enhanced* version of the 4t. It has a new processor that's 10 times faster, greater memory capacity, LED lights to indicate Bluetooth charging and power status, an external charging port, quick release battery clamps and Bluetooth or 802.11b/g wireless connectivity. It also comes with optional external charging contacts and credit card reader.

Can I use the 4t^e in legacy applications without changing software?

The 4t^e printer is compatible with existing applications, allowing resellers and users around the globe to easily drop the 4t^e into legacy applications without any modifications.

Will you continue to offer the 4t ?

Yes, the 4t is still being offered, however due to the 4t^e's faster processor and increased memory capacity, we recommend transitioning to the 4t^e for wireless 802.11b/g and Bluetooth applications. The 4t^e integrates seamlessly into existing 4t wireless applications without any platform or software modifications required.

Is the 4t^e as rugged and reliable as the 4t?

The 4t^e is every bit as rugged and reliable as the original 4t and perhaps even more so. In the harsh and punishing environment of mobile computing, 98.06% of all 4t printers sold in the past 12 months continue to run trouble-free. Over the past six years, 9 out of 10 have never experienced a single problem. To see the 4t in action, just view the "reliability" video on our website and watch as we drop it 46 feet off the roof, run it over with a truck and drag it through the streets behind a jeep. www.oneilprinters.com

What is the warranty for the 4t^e?

The 4t^e includes a two-year warranty that covers the printer completely, even unlimited use of the printhead (when used with approved media grades). O'Neil is the only portable printer manufacturer in the world that offers its VARs and users two years of protection and peace-of-mind. Extended coverage is also available.

Can I print thermal transfer labels on a 4t^e?

The 4t^e is a direct thermal printer however; it can print durable thermal transfer labels when used with *DTransfer*, a unique new media available exclusively from O'Neil Printer Supplies Group.
